

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application.

Listings of Claims:

Please Amend the remaining claims as indicated below:

1-8. (Canceled)

9-25. (Canceled).

26. (Currently Amended) A golf equipment fitting system, comprising:

a launch data collection system, comprising a high speed color camera system configured to obtain information related to the launch of a golf ball based on color markings on the golf ball, the color markings comprising at least two different colors;

a swing data collection system, comprising:

a strain gauge configured to sense shaft deflection;

a wireless transmitter coupled to the strain gauge, the wireless transmitter configured to receive data from the strain gauge and to transmit the receive data; and

a processor system configured to optimize the launch angle, spin rate, and velocity of a golf ball for a particular golfer based on the received launch information and strain gauge data, wherein the launch angle, velocity, and spin rate are optimized so as to allow the golfer to achieve maximum distance and control when hitting a golf ball.

27. (Previously Presented) The golf equipment fitting system of claim 26, wherein the swing data collection system is further configured to derive a load time for the golfer's swing based on the received swing data.

28. (Previously Presented) The golf equipment fitting system of claim 26, wherein the swing data collection system is further configured to derive a load pattern for the golfer's swing based on the received swing data.

29. (Previously Presented) The golf equipment fitting system of claim 26, wherein the swing data collection system is further configured to derive ramp potential for the golfer's swing based on the received swing data.

30. (Previously Presented) The golf equipment fitting system of claim 26, wherein the swing data collection system is further configured to derive a load time, a load pattern, and a ramp potential based on the received swing data and to derive a shaft flex based on the derived load time, load pattern, and shaft potential.

31. (Previously Presented) The golf equipment fitting system of claim 26, wherein the golf fitting system further comprises a display, and wherein the swing data collection system is configured to display information related to the received data on the display.

32. (Previously Presented) The golf equipment fitting system of claim 31, wherein the swing data collection system is configured to display the information in a graphical format.

33. (Original) The golf equipment fitting system of claim 26, wherein the strain gauge is configured to sense the lead or lag deflection of the shaft.

34. (Previously Presented) The golf equipment fitting system of claim 26, wherein the strain gauge is configured to sense the toe up or toe down deflection of the shaft.

35. (Original) The golf equipment fitting system of claim 26, wherein the strain gauge is configured to sense a peak deflection of the shaft.

36. (Original) The golf equipment fitting system of claim 26, wherein the swing data collection system further comprises a strap configured to secure the wireless transmitter.

37. (Original) The golf equipment fitting system of claim 26, wherein the strain gauge and wireless transmitter comprises a single device.

38. (Original) The golf equipment fitting system of claim 26, wherein the swing data collection system further comprises a plurality of strain gauges each of the plurality of strain gauges configured to sense shaft deflection.

39. (Original) The golf equipment fitting system of claim 36, wherein the wireless transmitter is coupled to each of the plurality of strain gauges, and wherein the wireless transmitter is configured to receive data from each of the plurality of strain gauges and to transmit the received data to the shaft fitting system.

40. (Previously Presented) The golf equipment fitting system of claim 38, wherein the swing data collection system further comprises a plurality of wireless transmitters, each of the plurality of wireless transmitters coupled to one of the plurality of strain gauges, and wherein each of the plurality of wireless transmitters is configured to receive data from the associated strain gauge and transmit it to the shaft fitting system.

41-52. (Canceled).

53. (Previously Presented) The golf equipment fitting system of claim 26, wherein the information obtained by the launch data collection system includes information related to the initial velocity of a golf ball as it is launched.

54. (Previously Presented) The golf equipment fitting system of claim 26, wherein the information obtained by the launch data collection system includes information related to the spin rate of a golf ball as it is launched.

55. (Previously Presented) The golf equipment fitting system of claim 26, wherein the information obtained by the launch data collection system includes information related to the launch angle of a golf ball as it is launched.

56. (Previously Presented) The golf equipment fitting system of claim 54, wherein the spin rate information obtained by the launch data collection system includes information related to the backspin of the golf ball.

57. (Previously Presented) The golf equipment fitting system of claim 54, wherein the spin rate information obtained by the launch data collection system includes information related to the sidespin of the golf ball.

58. (Previously Presented) The golf equipment fitting system of claim 54, wherein the spin rate information obtained by the launch data collection system includes information related to the rifle spin of the golf ball.

59. (Canceled).
